

# Auto Dealerships

AWB Engineers has extensive experience in design of automobile and truck sales and service facilities. This includes both commercial and truck fleet maintenance facilities. We understand the significance of each section of the dealership, i.e. Showroom, Service Desk, etc. We are also aware of the need to integrate some of these sections and to isolate others.

AWB architects, engineers and designers are knowledgeable and creative relative to their work in designing these facilities. Our experienced professionals bring talents in many disciplines and are supported with "state-of-the-art" design tools. Standard design practices are typically augmented with imaginative design solutions to promote the personality of the dealership while maintaining the functionality of the business.

**AWBENGINEERS**

AWB Engineers strives to create simplicity in construction, operation and maintenance without sacrificing the aesthetics of the design. This maximizes our client's return on investment through the entire life span of the facility and simultaneously provides an appealing environment for the prospective automobile or truck buyer.

AWB Engineers is capable of complete dealership design. This includes:

- Site Preparation
- Utilities
- Civil Design
- Structural Design
- Architectural Plans & Details
- Mechanical Packages (HVAC, piping, etc.)
- Electrical Systems
- Employee Support Facilities
- Customer Waiting Lounges & Facilities
- Service Bays
- Parts Storage and Distribution (Internal & Public)

AWB Engineers recognizes that the definition for a good project is one in which the specified scope is completed within agreed upon budgetary and schedule constraints. We pride ourselves on meeting these objectives. We also have a complete understanding that this accomplishment is necessary to merit the repeat business that is so important to our stability.
