

BUILDINGS FOR *Service / High Technology*

AWB Engineers has extensive experience in design of buildings used for special services or high technology manufacturing. These buildings are characterized by a specific functionality that requires a unique application of design principles and choice of building materials (i.e. concrete, steel, masonry, etc.)

AWB architects, engineers and designers are knowledgeable and creative relative to their work in designing these buildings. Our experienced professionals bring talents in many disciplines and are supported with "state-of-the-art" design tools. All of these resources are needed to perform the design tasks required.

AWB Engineers strives to create simplicity in construction, operation and maintenance to maximize our client's return on investment through the entire life span of the facility. Simultaneously, we consider the flexibility of the design. Rapid change and growth in high technology businesses require forethought to be an integral part of each design.

AWB Engineers has completed designs for the following applications:

- Computer Rooms for Various Industries (more than 50 facilities)
- Unmanned Aerial Vehicles (Drones)
- Electronic Component Manufacturing
- Specialized Storage Systems for Various Industries
- Specialized Material Handling Systems for Various Industries

AWB Engineers recognizes that the definition for a good project is one in which the specified scope is completed within agreed upon budgetary and schedule constraints. We pride ourselves on meeting these objectives. We also have a complete understanding that this accomplishment is necessary to merit the repeat business that is so important to our stability.
